Documentation of Survival System | Grown Assets

Survival System: Here you will find the full documentation for the Survival System.

Overview

What is the "Survival System | Grown Assets":

The Survival System is a great tool to create a survival game in low poly style. Gathering, building, crafting, sleeping, full humanoid physics based player and many more system solutions are included. Developing a game is hard, whether you are a professional, beginner or expert. Make your work easy with Survival System | Grown Assets.

Tips

Check out the showcase scene: Grown Assets → Survival System → Content → Scenes → Showcase

Adding the player to your scene

1. Grown Assets → Survival System → Content → Prefabs → Game → Survival
2. Drag and drop the prefab in the hierarchy

Getting set up

▼ Step 1: Conditions

#

- Use the latest unity version (currently: 2021.3.16f)
- 5gb storage
- Own Survival System | Grown Assets

▼ Step 2: Create a project

- Open unity hub
- Create a new project
- Make sure to use the latest version

Download: [Unity Particle Pack 5.x](#)

▼ **Step 3: Import the effects**

- Go to Window > Package Manager
- Search for Unity Particle Pack 5.x
- Download and import the package

▼ **Step 4: Import the Survival System**

- Go to Window > Package Manager
- Search for Survival System - Grown Assets
- Download and import the package
- Click on Install/Upgrade
- Restart the editor (click yes)
- Import the package files

Scene Setup

Step 1: Add the Survival System to the scene

1. Grown Assets → Survival System → Content → Prefabs → Game → Survival
2. Drag and drop the prefab in the hierarchy

Add the next functions to your game:

Consumables

Setting up consumables

Step 1 - Create an item

Take a look at the items guide to see how to setup a new item.

Value	25
▼ Element 2	
Type	Hunger
Value	25
+ -	
Wieldable	
Wieldable Prefab	None (Game Object)

Step 2 - Pickup Item

Now you will need to create a pickup item:

Items

Items

Create an item

Step 1 - Create an item

Follow the steps below to create a item:

▼ **Step 1**

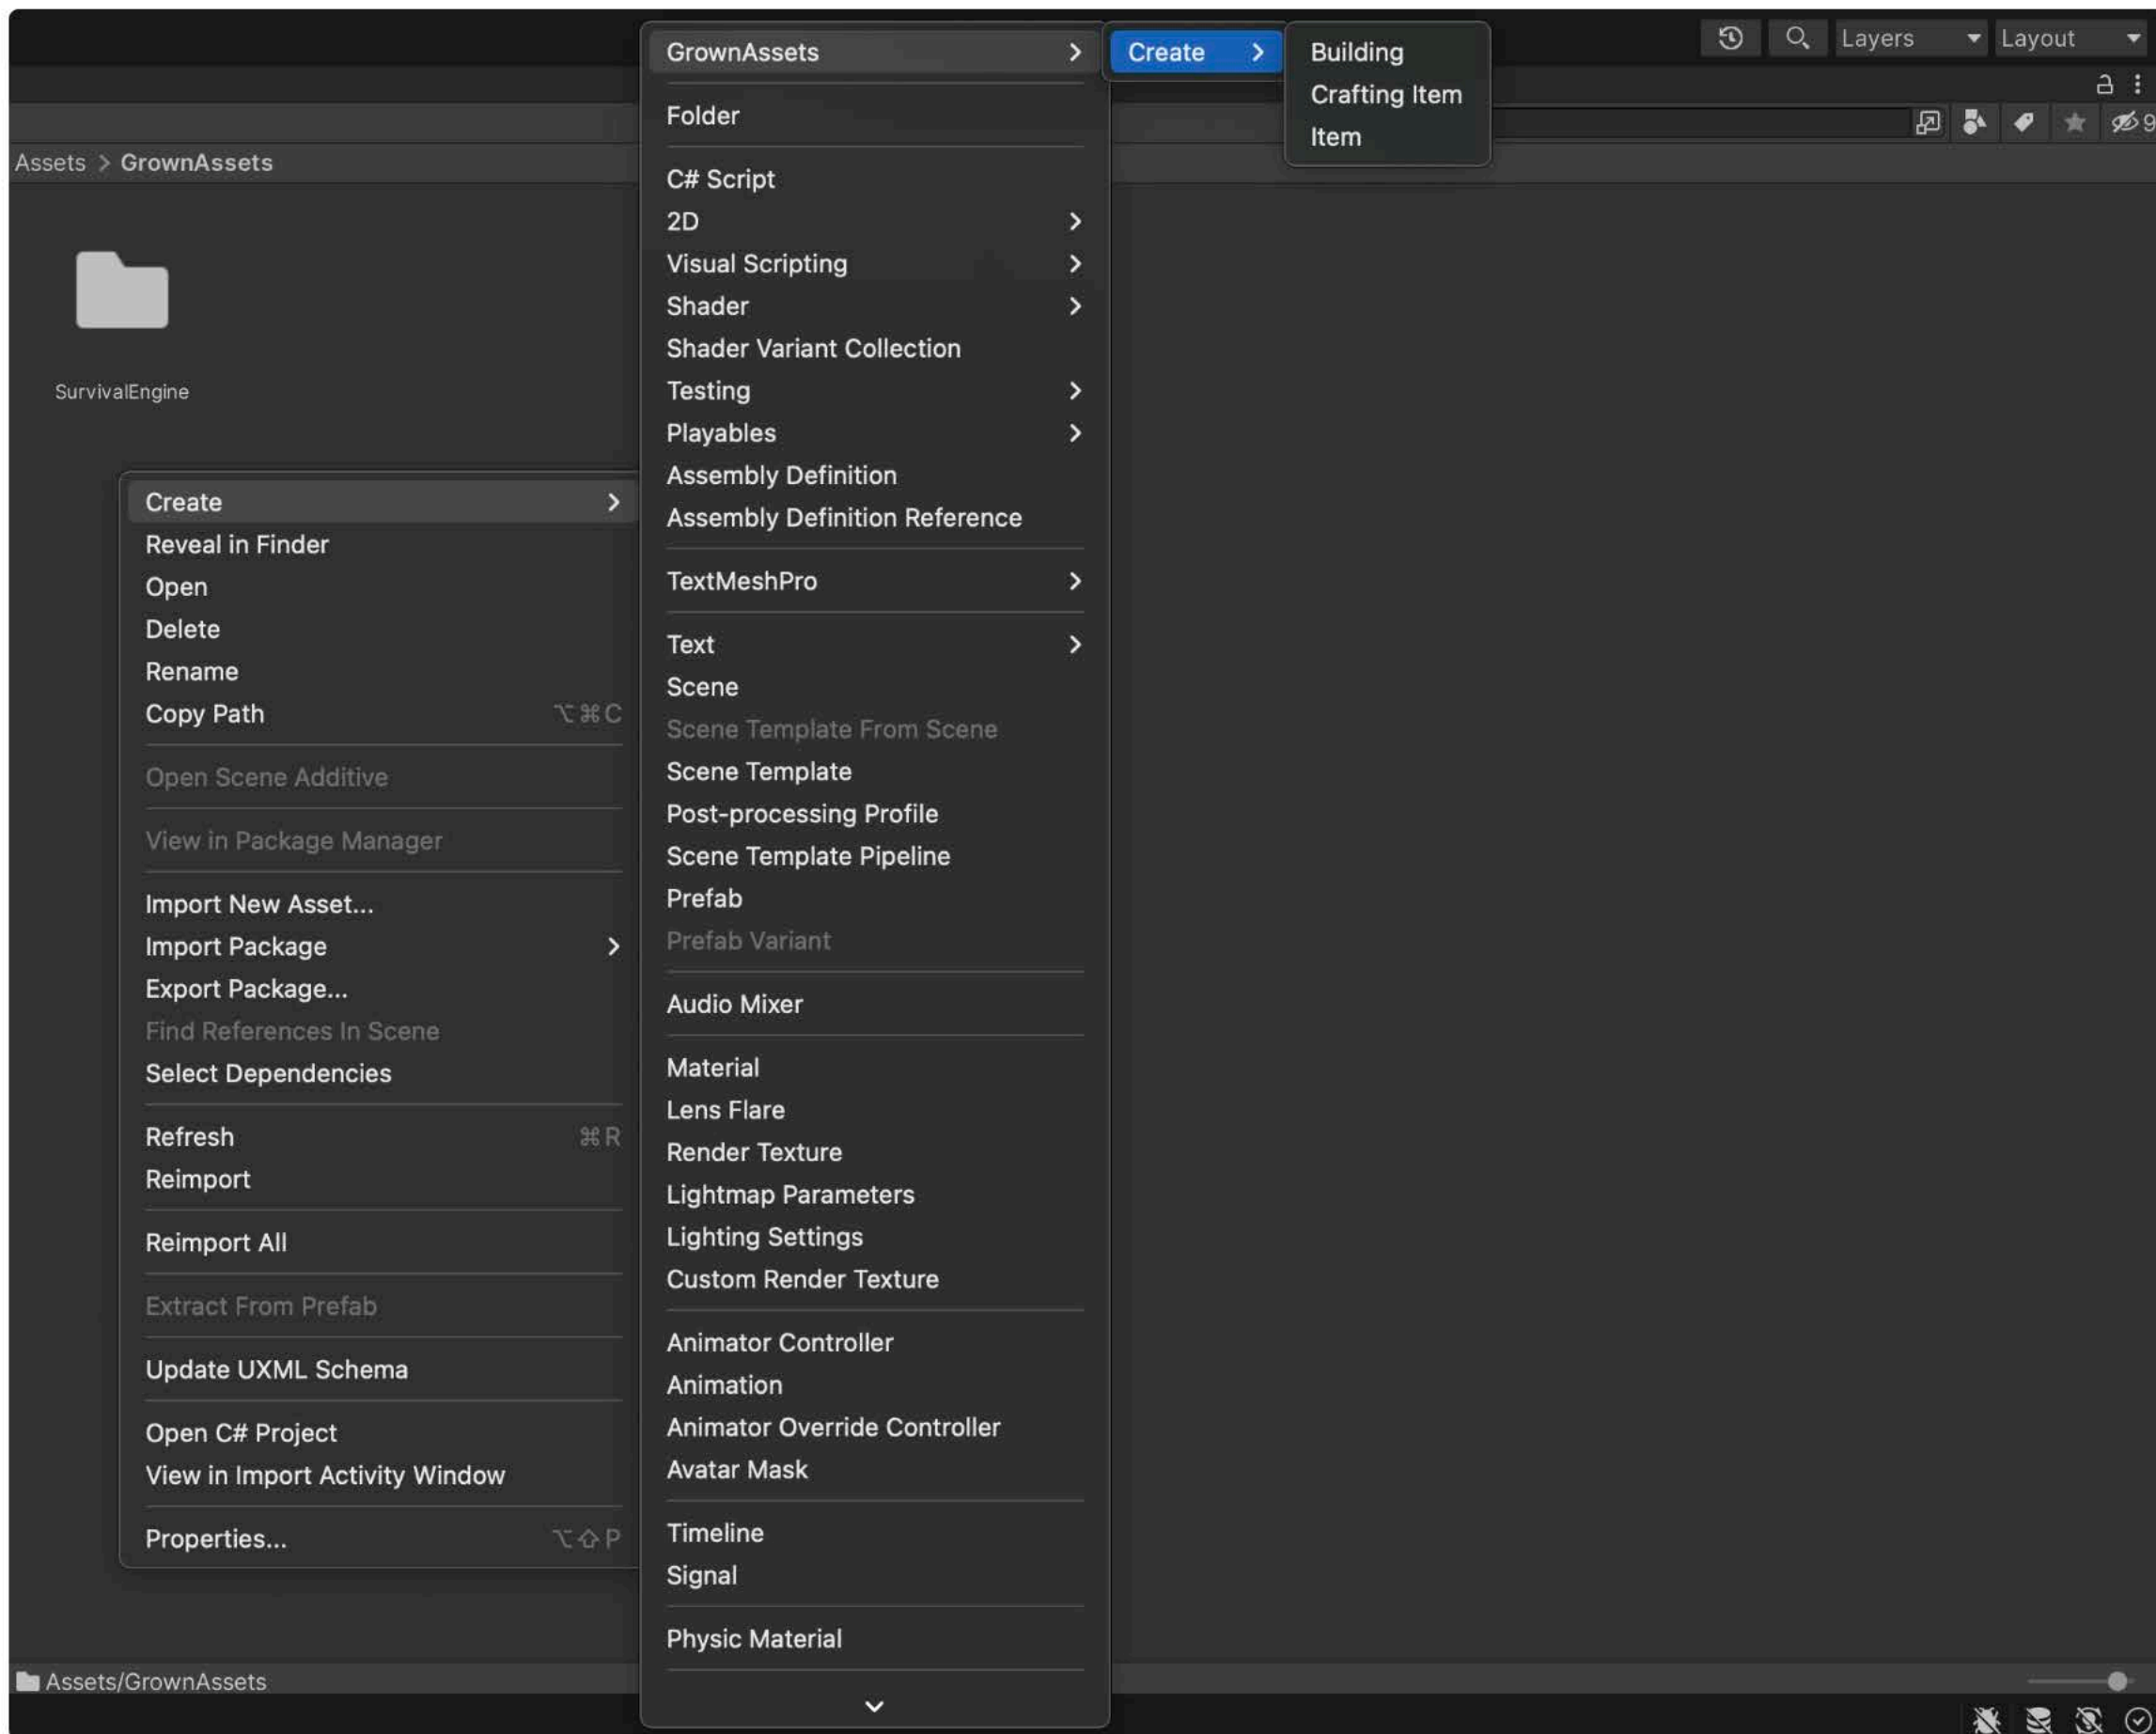

Right click on the mouse button

▼ **Step 2**

Create > GrownAssets > Create

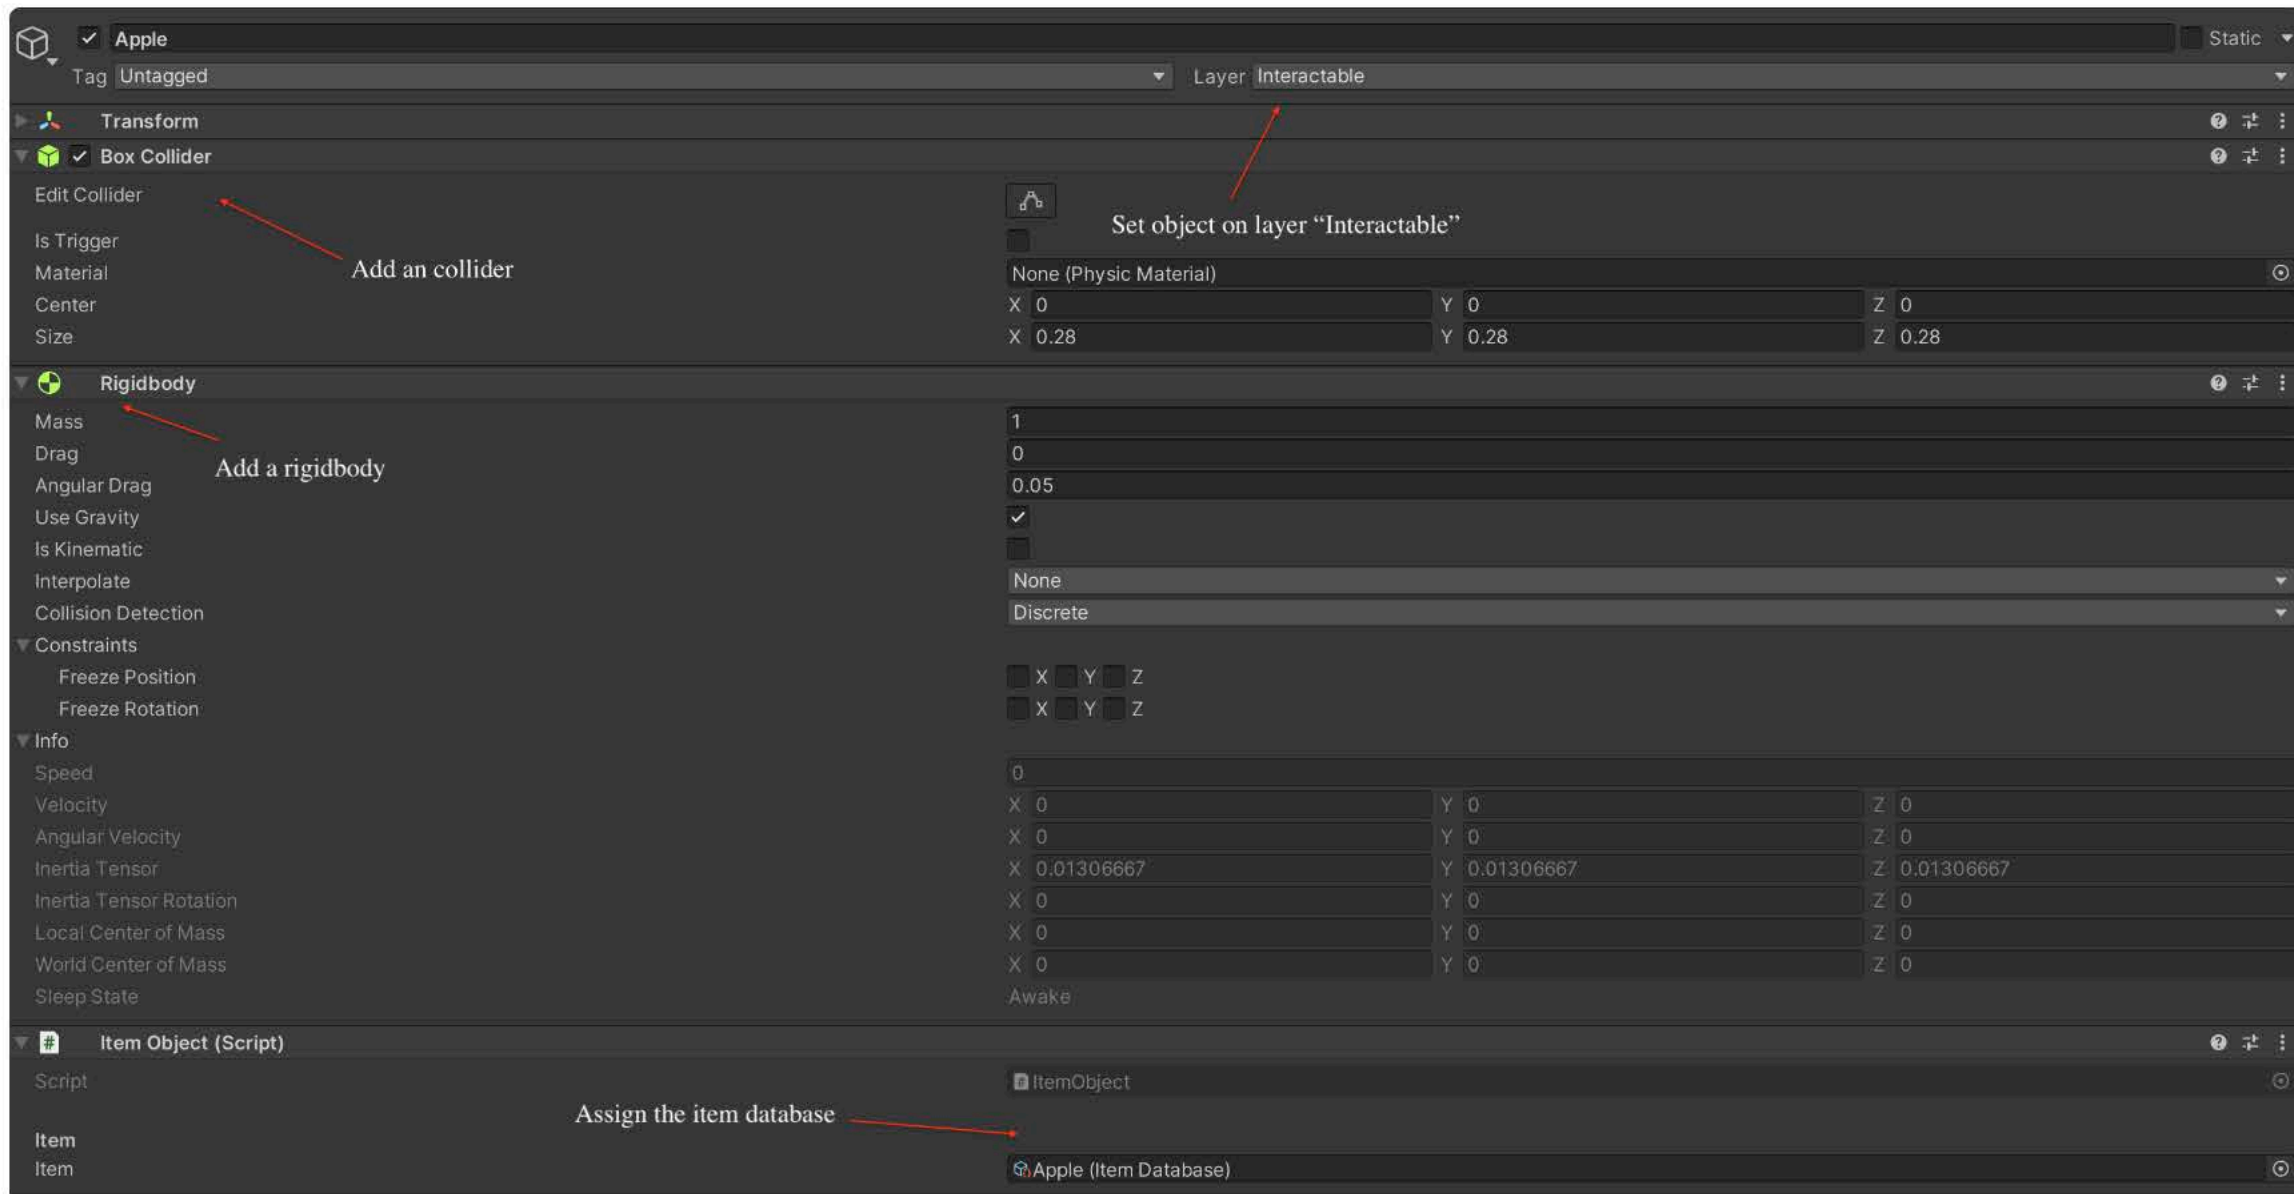

▼ **Step 3**

Choose the kind of item that you want to create

Step 2 - Create an Item Object

Now you will need to create an item object to interact with your item (assign this object as drop item above):

Gathering

Create an resource

You can create any kind of resource. For resources such as trees, the settings may be different.

Step 1: Create an Item

Items

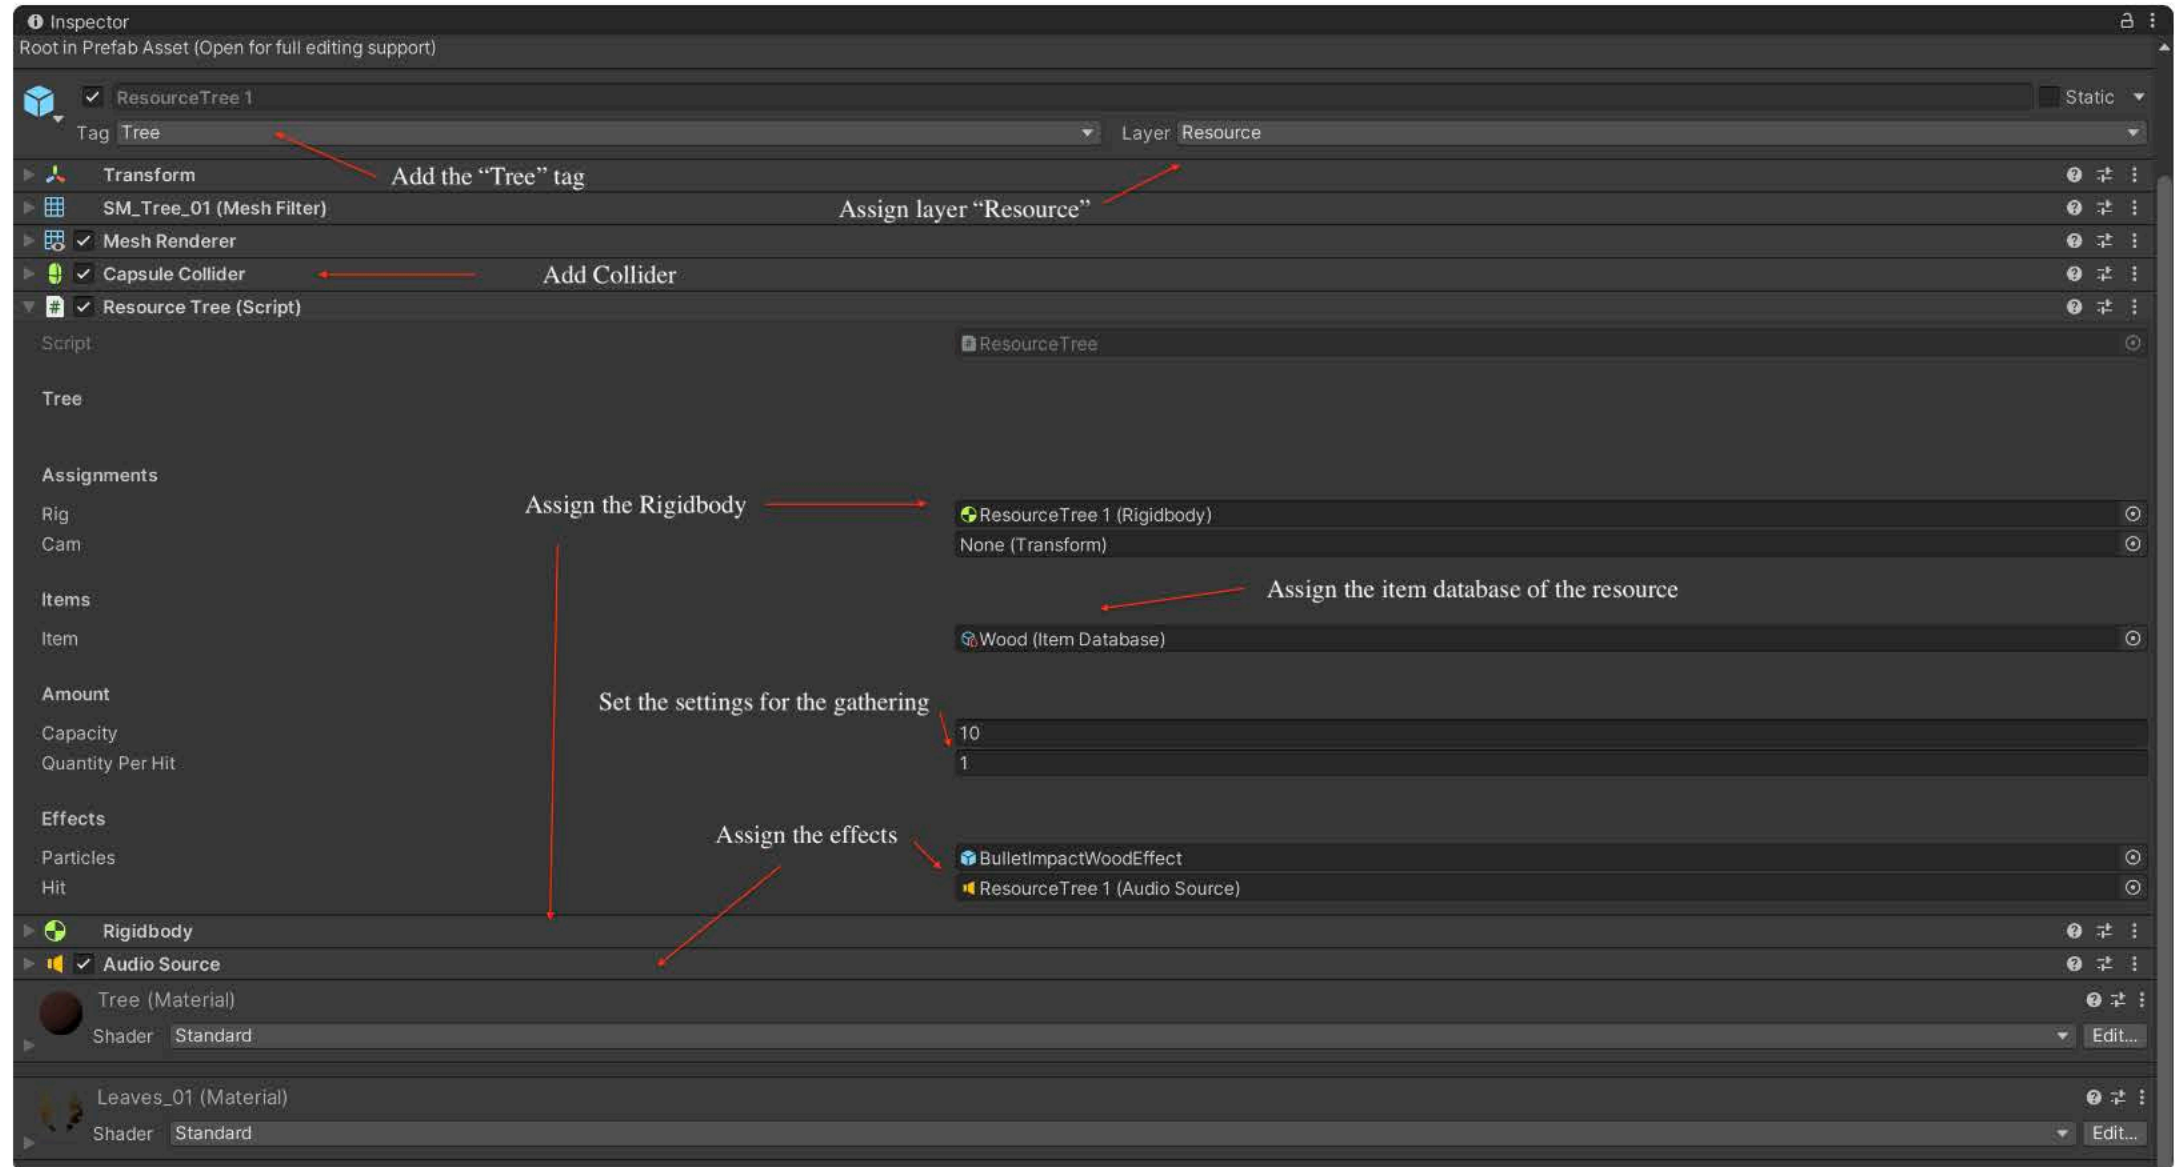

Step 2: Create an Item Object

Wieldables

Step 1: Create an Item

Items

Step 2: Create an Item Object

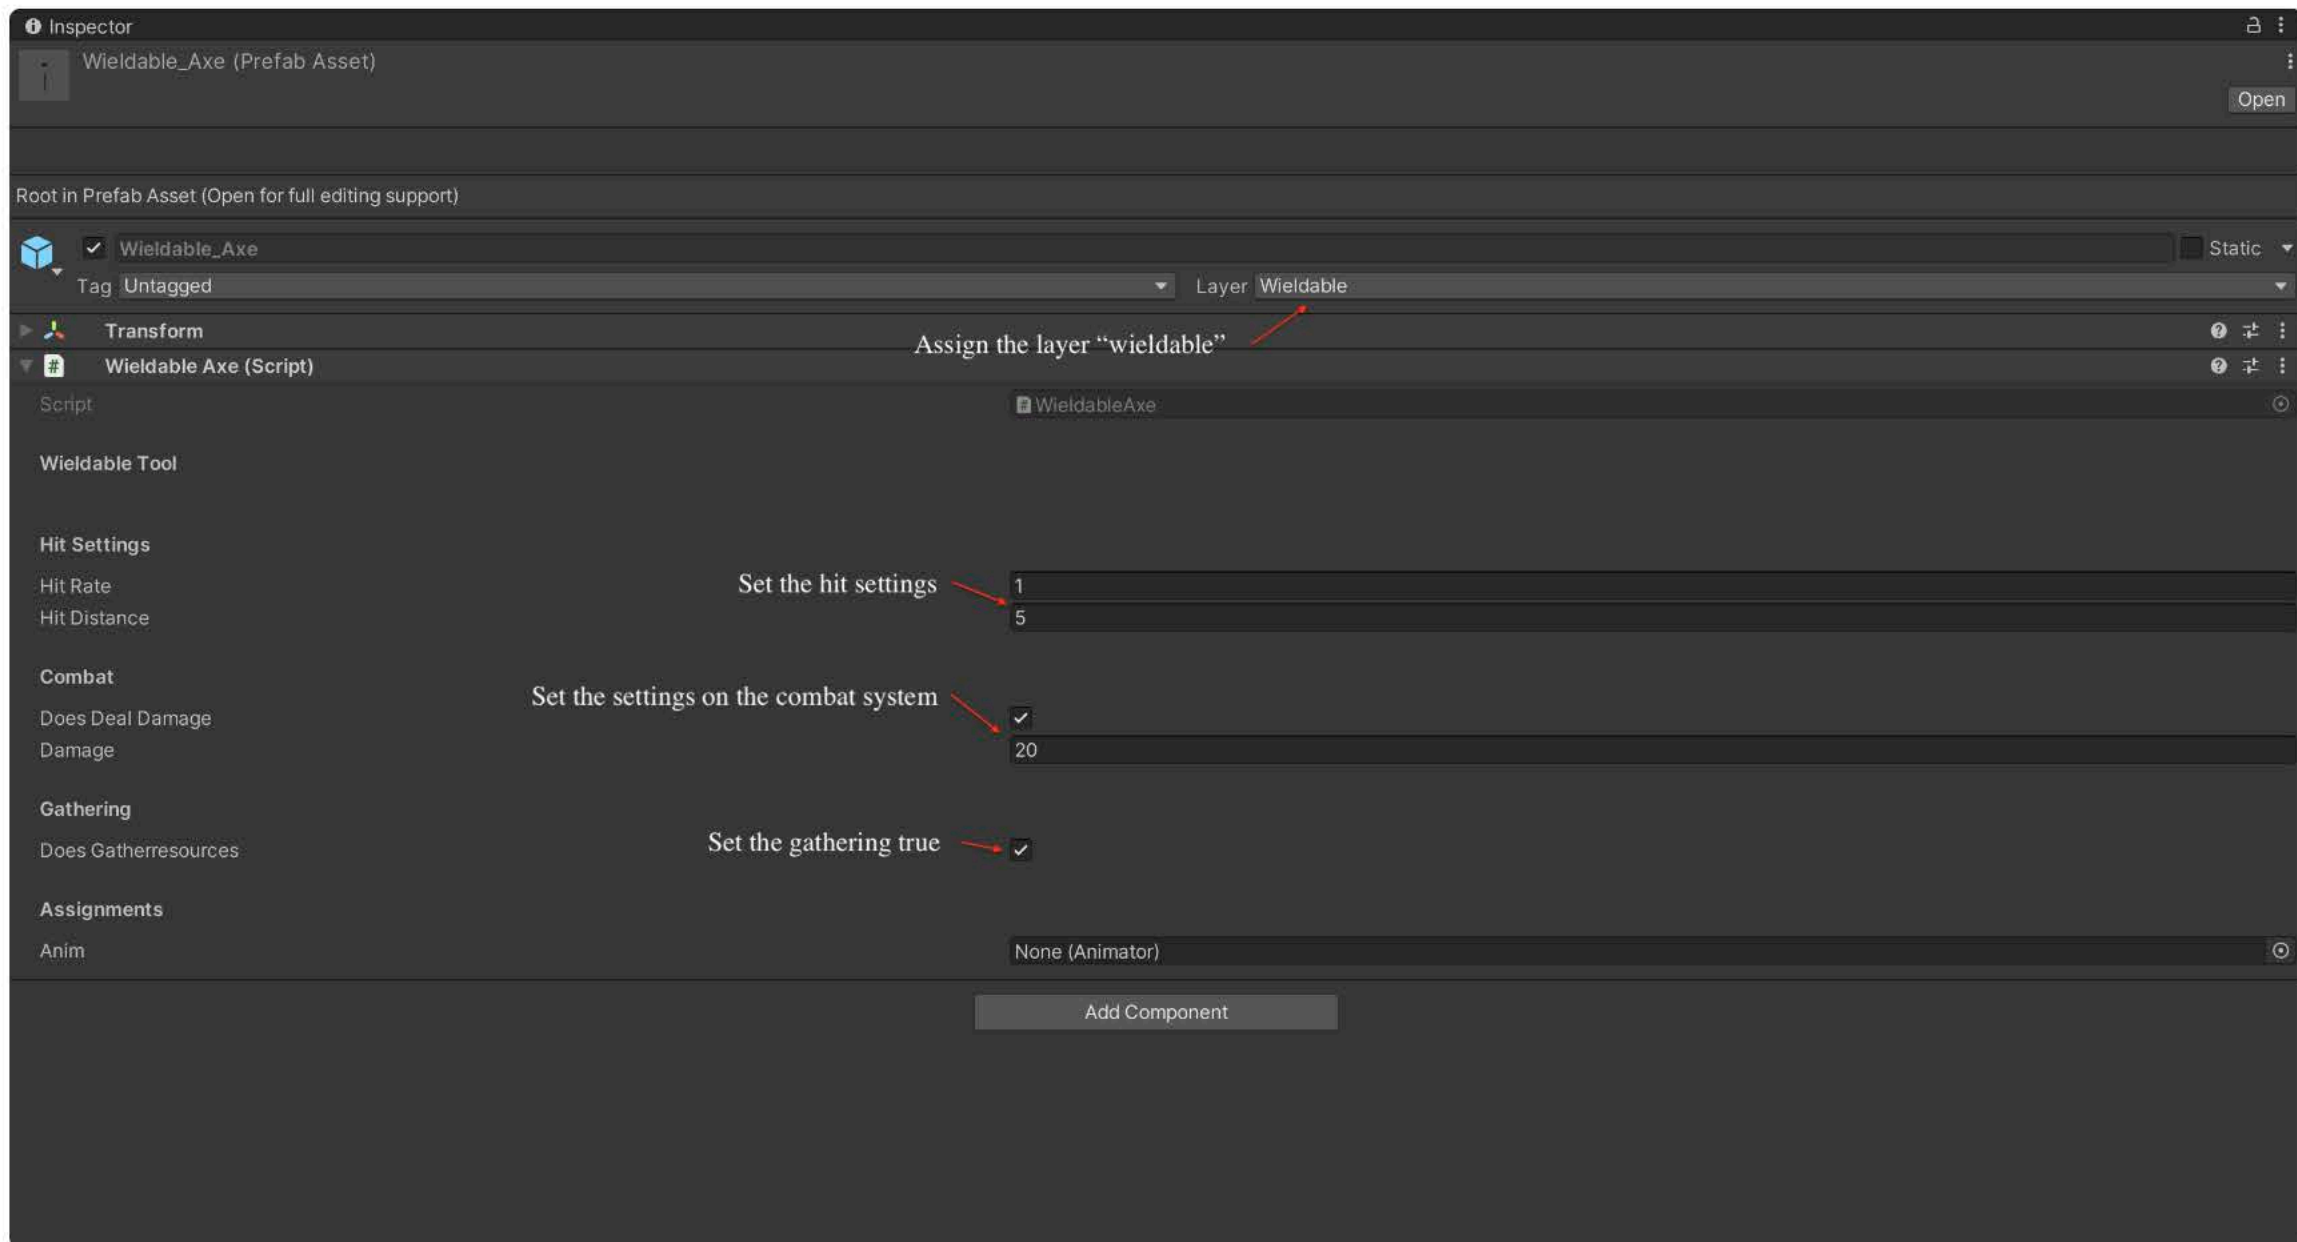

Items

Step 3: Create the Wieldable

On wieldables such as an torch, the settings may be different because it has no action (so you will just need to assign the wieldable script and follow the previous steps). Here you will see an example item as axe.

Buildings

Step 1: Create a Building Item

Items

Step 2: Setup Building Item

Assign the building object and the building placer object

Set the price for the building

Step 3: Create a Building Object

Step 4: Create a Building Placer Object

Step 4: Add a Building UI Slot

Craftings

Step 1: Create a Crafting Item

Items

Step 2: Setup Crafting Item

The screenshot shows the Unity Inspector window for a 'Pickaxe (Crafting Item)'. The 'Script' field is set to 'CraftingItem'. The 'Crafting Item' section is expanded, showing the following fields:

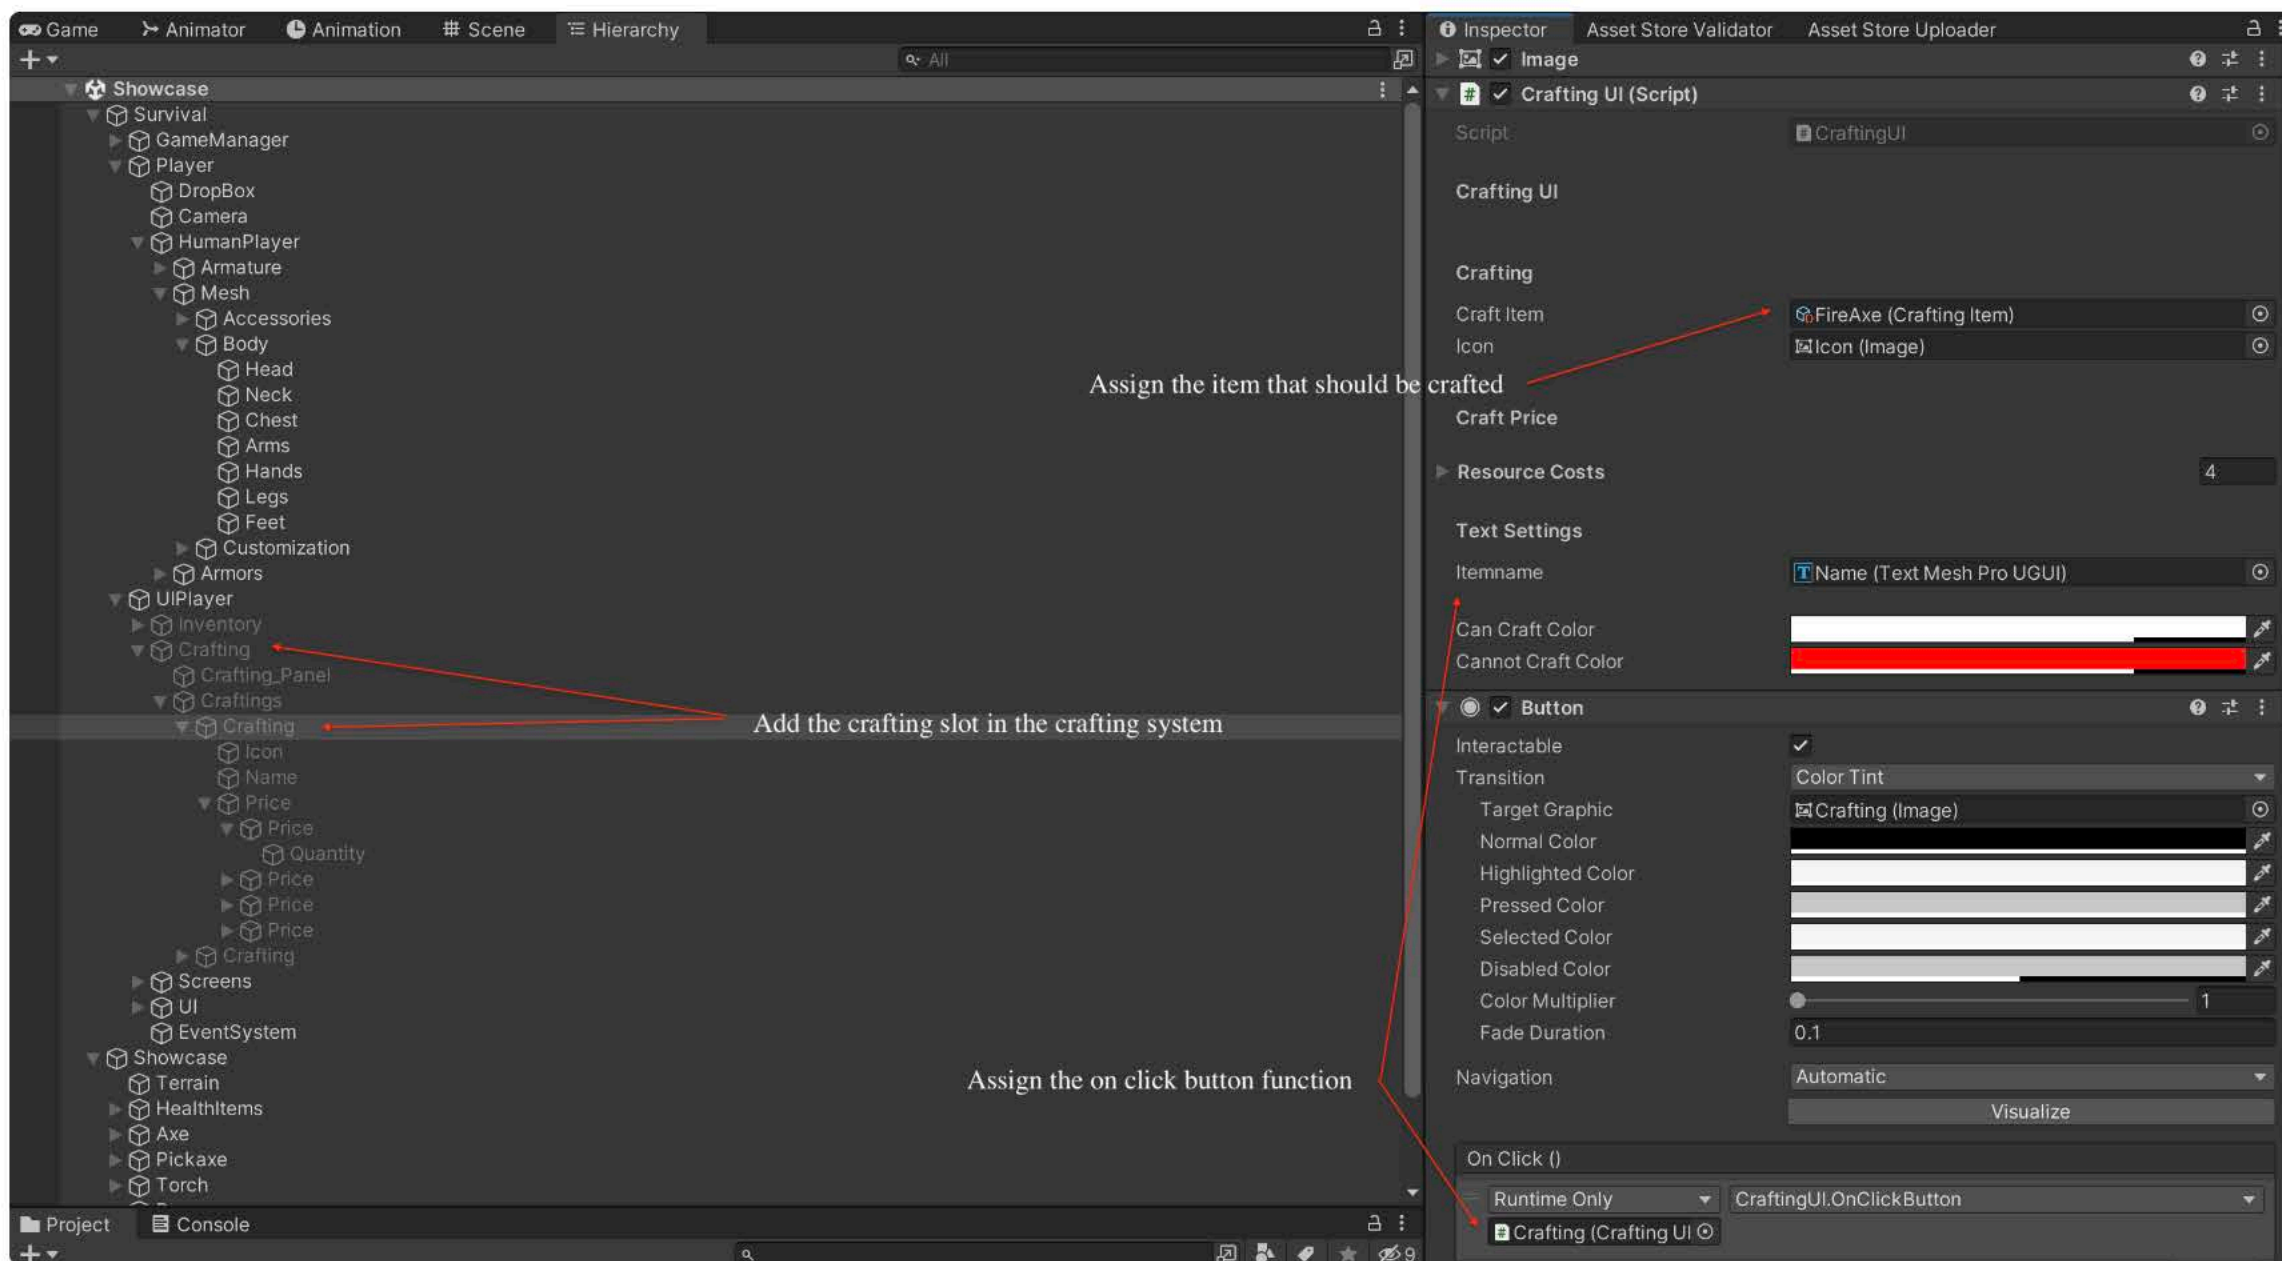

- Item:** Set to 'Pickaxe (Item Database)'.
- Item To Craft:** (Empty field).
- Price:** Set to 3.
- Cost:** (Expanded section showing three elements):
 - Element 0:** Item is 'Wood (Item Database)', Quantity is 4.
 - Element 1:** Item is 'Stone (Item Database)', Quantity is 3.
 - Element 2:** (Empty field).

Annotations with red arrows point to the 'Pickaxe (Item Database)' field and the 'Cost' field.

Assign item that should be crafted

Set the price for the object

Step 3: Add Crafting UI Slot

Emerald AI Integration

✓ Step 1: Import the Emerald AI Integration

GrownAssets → SurvivalEngine → Integrations → EmeraldAI

✓ Step 2: Setup the AI System

1. Go in your scene to Survival → Player
2. Follow the steps on the picture below

Emerald AI Player Damage (Script)

Script: EmeraldAIPlayerDamage

Active Effects: 0

List is Empty

Is Dead: ☐

Emerald AI Player Health (Script)

Script: EmeraldAIPlayerHealth

Current Health: 100

Damage Event ()

Runtime Only: ☐ HealthSystem.TakePhysicDamage

Player (Health System): ☐ 10

Death Event ()

Runtime Only: ☐ HealthSystem.Die

Player (Health System): ☐

Emerald Survival Damage (Script)

Script: EmeraldSurvivalDamage

Damage Emerald AI

Player: ☐ 1

Damage Amount: ☐ 100

Raycast Distance: ☐ 100

Camera Component: ☐ Camera (Camera)

add these scripts

assign the player object and assign the functions

assign the camera and the player

set the damage amount when hitting the target
