

The Cooking Pack package does not contain any code. Colliders may simply be removed from objects in the inspector menu if they are not needed. Objects are not rigged for animations. Objects are to scale to Unity's grid sizing, assuming one block of grid is a meter to make the models fit well into a scene with minimal adjustment. Object materials will contain a normal, albedo, roughness, and metallic (if the object has metal) map which are already together within the prefabs.

I hope you enjoy the asset pack and if you have any feedback or issues, please contact me at Danmct1995@gmail.com before leaving a review. I will do my best to assist you if I can.
